

HOST RANGES AND INFESTATION INDICES OF FRUIT FLIES (DIPTERA: TEPHRITIDAE) IN MPUMALANGA AND LIMPOPO, SOUTH AFRICA)

PO-21

T. Grové & K. De Jager, ARC-TSC, South Africa

Fruit from 40 exotic and 20 indigenous plant species were sampled in Limpopo and Mpumalanga. Fruit were incubated to determine the presence of fruit fly species. *Dacus* spp. were found infesting Cucurbitaceae fruit. *Bactrocera dorsalis* was reared from 19 plant species belonging to 11 families and mango and guava were identified as important hosts. High infestation indices of *Ceratitis capitata* were found in *Coffea* species. *Ceratitis quilicii* and *Ceratitis rosa*, which are two closely related species, were found to share the same host plants. However, *C. rosa* dominated in fruit sampled at the ARC-TSC experimental farm at Mbombela. High infestation indices of *C. rosa* were found in exotic fruit of the family Myrtaceae. Stem fruit (Sapotaceae) was an important indigenous host for *C. quilicii* and *C. rosa*. *Ceratitis cosyra* seemed to have a more restricted host range in comparison to the other economically important *Ceratitis* species.

Host plants - *Ceratitis cosyra*

| Family | Host plant |
|---------------|--------------------|
| Anacardiaceae | Marula |
| Anacardiaceae | Mango |
| Clusiaceae | African mangosteen |
| Leguminosae | Wild mango |
| Myrtaceae | Feijoa |
| Myrtaceae | Guava |
| Salicaceae | Kei-apple |

Host plants – *Bactrocera dorsalis*

| Family | Host plant |
|---------------|-------------------|
| Anacardiaceae | Mango |
| Anacardiaceae | Marula |
| Lythraceae | Pomegranate |
| Malpighiaceae | Acerola |
| Meliaceae | Cape ash |
| Myrtaceae | Feijoa |
| Myrtaceae | Guava |
| Myrtaceae | Strawberry guava |
| Myrtaceae | Costa Rican guava |
| Myrtaceae | Rose apple |
| Myrtaceae | Wax jambu |
| Oxalidaceae | Carambola |
| Rhamnaceae | Red ivory |
| Rhamnaceae | Brown ivory |
| Rosaceae | Loquat |
| Rosaceae | Apple |
| Rubiaceae | Wild coffee |
| Rubiaceae | Arabica coffee |
| Rubiaceae | Robusta coffee |
| Rutaceae | White sapote |
| Rutaceae | Sweet orange |
| Rutaceae | Orange jessamine |
| Salicaceae | Kei-apple |
| Salicaceae | Natal apricot |
| Sapotaceae | Sapodilla |
| Sapotaceae | Stem fruit |

Host plants - *Ceratitis capitata*

| Family | Host plant |
|---------------|-----------------------|
| Anacardiaceae | Mango |
| Apocynaceae | Simple-spined num-num |
| Clusiaceae | African mangosteen |
| Malpighiaceae | Acerola |
| Meliaceae | Cape ash |
| Myrtaceae | Surinam cherry |
| Myrtaceae | Jaboticaba |
| Myrtaceae | Strawberry guava |
| Myrtaceae | Guava |
| Leguminosae | Wild mango |
| Oxalidaceae | Carambola |
| Rhamnaceae | Red ivory |
| Rhamnaceae | Brown ivory |
| Rosaceae | Loquat |
| Rosaceae | Apple |
| Rubiaceae | Wild coffee |
| Rubiaceae | Arabica coffee |
| Rubiaceae | Robusta coffee |
| Rutaceae | White sapote |
| Rutaceae | Sweet orange |
| Rutaceae | Orange jessamine |
| Salicaceae | Kei-apple |
| Salicaceae | Natal apricot |
| Sapotaceae | Milkwood |
| Sapotaceae | Stem fruit |

Host plants - *Ceratitis quilicii* and *Ceratitis rosa*
